<p>THE REPLY FILED <u>29 March 2007</u> FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.</p> <p>1. <input checked="" type="checkbox"/> The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:</p> <p>a) <input checked="" type="checkbox"/> The period for reply expires <u>3 months</u> from the mailing date of the final rejection.</p> <p>b) <input type="checkbox"/> The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).</p> <p>NOTICE OF APPEAL</p> <p>2. <input type="checkbox"/> The Notice of Appeal was filed on _____. A brief in compliance with 37 CFR 41.37 must be filed within two months of the date of filing the Notice of Appeal (37 CFR 41.37(a)), or any extension thereof (37 CFR 41.37(e)), to avoid dismissal of the appeal. Since a Notice of Appeal has been filed, any reply must be filed within the time period set forth in 37 CFR 41.37(a).</p> <p>AMENDMENTS</p> <p>3. <input checked="" type="checkbox"/> The proposed amendment(s) filed after a final rejection, but prior to the date of filing a brief, <u>will not</u> be entered because</p> <p>(a) <input type="checkbox"/> They raise new issues that would require further consideration and/or search (see NOTE below);</p> <p>(b) <input type="checkbox"/> They raise the issue of new matter (see NOTE below);</p> <p>(c) <input checked="" type="checkbox"/> They are not deemed to place the application in better form for appeal by materially reducing or simplifying the issues for appeal; and/or</p> <p>(d) <input type="checkbox"/> They present additional claims without canceling a corresponding number of finally rejected claims.</p> <p>NOTE: <u>See Continuation Sheet</u>. Continuation of 3. NOTE: The amendment to independent claims to include the limitations "obtaining a total rating score" is taught by the Applicant's admission of prior art (see Fig. 1, the total rating score corresponds to each number on the y axis). Please note that as described in the Specification of the present invention of what is known from the prior art, on Page 1, last paragraph, "Individual parameters used for rating a batch process include, for example, production cycle time, amount of production, quality of product, production cost and the like... The result of the comparison is expressed, for example, by a score of 0 to 100%". Applicant contends that Tanaka does not disclose "preparing in advance plural data including performance rating items associated with rating values as rating indexes for a production process". Examiner disagrees because Tanaka discloses such limitations (Fig. 22, i.e., Processing Performance 1, Processing Performance 2, Processing Performance 3, Comprehensive level 1, etc.); [0082], i.e., working dimension precision and working speed correspond to rating values). Tanaka further discloses that apparatus monitoring signals of multiplicity of kinds are displayed in the window 22 and 23 ([0082]). There are various types of processing performances 1, 2, 3 and the quality of production can be displayed (see Figs. 30-33). Therefore, the production is rated based on plural performance rating items. Applicant further contends that Tanaka does not add or subtract a point or points to or from the rating values OR perform another arithmetic operation for rating in accordance with the result of the judgement. Examiner disagrees because Tanaka discloses that comparison data of the described signals can be obtained simply by deriving the difference between them ([0074]). Furthermore, a judgement is conducted to issue a warning when the processing is abnormal. Figs. 30-33 show the results of the abnormal processed wafers. The result of the judgement is displayed. Arithmetic operations must be performed by the computer in order to display such results.
